**DATLEX**

Under Vehicle Surveillance System is a digital surveillance system specially designed for security professionals to scrutinise the undercarriage of all vehicles with a view to detecting Contraband, Drugs, Explosives, and other hiding Objects. UVSS solutions are designed to scan, monitor, and digitally record crisp, clear digital video images of the entire width of a vehicle's undersides - all with one permanent or portable system, ideal cost-effective and convenient solution for checking passenger vehicles, vans, buses, semi tractors, trucks and trailers, and more. it's an ideal solution for governmental, military, corporate, and transportation facilities - wherever complete vehicle monitoring is required.

Advanced imaging and LED illumination provide clear, high resolution video of the vehicle's underside to help detect attached packages, explosives, and other objects. for monitoring, images are processed by digital video recorder (DVR) capable of recording 4-16 channels simultaneously and then displaying moving images on screen. The UVSS DVR delivers the full picture of a vehicle's entire width and length.

---

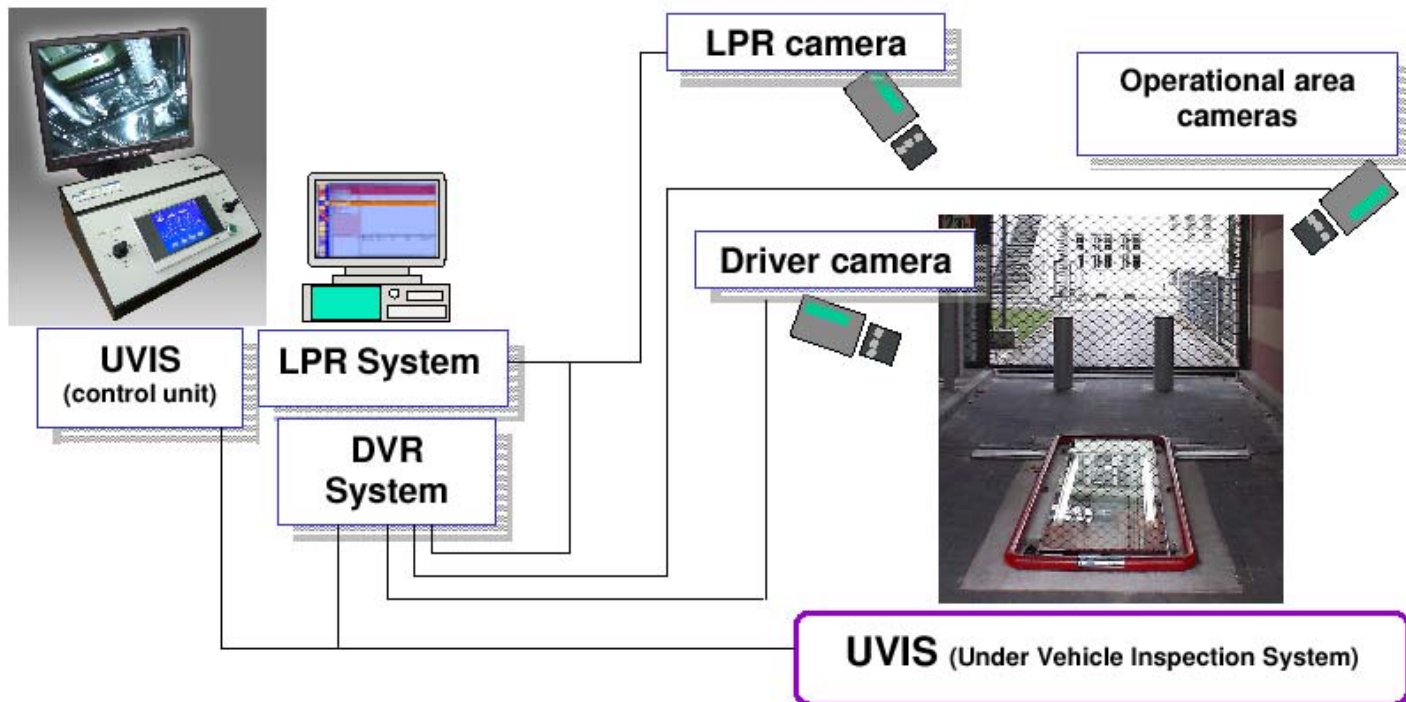

## **2. FEATURES & BENEFITS:**

- 2.1 Capability to scan the vehicle while stationary.
- 2.2 View above strut bars and other vehicle components from multiple angles and magnification.
